

Project Fact Sheet

Route 364 Page Avenue Extension Phase 3

Why Are the Road Improvements Needed?

Route 364 Page Avenue Extension was planned more than 30 years ago to provide a new connection and relief to congestion in crossing the Missouri River between St. Charles and St. Louis counties.

What Improvements will MoDOT Accomplish?

The Route 364 Page Avenue Extension when complete will provide a connection from I-64 at Route N all the way across the river into St. Louis County. The Phase 1 Missouri River bridge was completed in 2003. The Phase 2 improvements along Route 94 from Harvester to Mid Rivers Mall Drive will be complete in early fall 2012. Phase 3 is the final connection from Mid Rivers Mall Drive to the new interchange at Route N and Interstate 64. MoDOT has a budget of \$100 million for property acquisition, utility relocation, design and construction of Phase 3. Through the Design-Build contracting process, MoDOT will be working with contractors to get the most improvements for the available funds.

When Will Construction Begin?

The Design-Build contractor will be awarded the contract in spring 2013. This winning contractor's construction schedule will be public at that time. The deadline we are providing the contractors is to complete the road improvements no later than December 2014. The detailed schedule will be available once we select a contractor in spring 2013.

How Will Traffic Be Impacted?

The traffic plan will be determined by the Design-Build contractor selected to complete the design and determine the construction schedule. The information will be available publicly in spring 2013 when the contractor is selected. Any traffic impacts will have to be mitigated by the contractor.

How Many Properties Still Need to be Purchased?

MoDOT already has acquired the majority of the property, but there are still more than 20 left to purchase and those owners have all been contacted. The corridor for Route 364 has been publicly known since the environmental document in 1992.

Will You Be Building Sound Walls?

We will evaluate noise for properties built before 1992. These properties will have to meet all criteria for walls to be built. All homes built after the Page corridor was publicly approved in 1992 are not eligible for noise mitigation.
